PROJECT

Steganography Technique to Hide Information With in Image File: Steganography is the art of hiding the fact that communication is taking place, by hiding information in other information. This project is developed for hiding information in any image file. The scope of the project is implementation of steganography tools for hiding information includes any type of information file and image files and

the path where the user wants to save Image and extruded file. Information hiding is an emerging research area, which encompasses applications such as copyright protection for digital media, watermarking, fingerprinting, and steganography. Steganography hide the secrete message within the host data set and presence imperceptible and is to be reliably communicated to a receiver. The host data set is purposely corrupted, but in a covert way, designed to be invisible to an information analysis.

Methodology Used:

The method used to hide the information in the cover file is LSB Bit Substitution Technique. Using this approach, the least significant bits of information that determine the meaningful content of the original file can be replaced with new data in a way such that causes the least amount of distortion. The advantage of using this method is that the cover file size does not change after the execution of the algorithms.

TECHNICAL SKILLS

LANGUAGES KNOWN: C, C++,JAVA, Python, HTML, CSS, Bootstrap4, Laravel and PHP, AngularJS.

DATABASE KNOWLEDGE: Mysql Server, Php my admin.

FRAMEWORKS KNOWN: NET FRAMEWORK.

CERTIFICATION

Certified C, C++, Java in SST institution. Certified Python in SLA institution.

WORKSHOP

Attended the workshop of cloud computing. Attended the workshop of C++.

ACHIEVEMENTS

Awarded as the top scorer in Data base management system.

INTERESTS

Watching TED talks about day to day topics, problems and the way they are tackled by.

DECLARATION

I declare that the information furnished above is true to the best on my knowledge and belief.
